ATTICA...the benchmark for quality and service

High-torque, low-speed motor assemblies

- Service on Vickers-MHT and Staffa/Kawasaki HMB motors, the mainstay of high-torque, low-speed applications.
- Unmatched inventory, test capabilities and technical knowledge.
- Hundreds of new, remanufactured and core units in stock.
- Each remanufactured motor subject to complete dynamic load test in our lab.
- Motors are run on custom-built 350 hp motor test stations at torque measurements up to 20,000 ft/lbs and then warranted as new.

High-torque, low-speed motor assemblies
